

Fieldguide for Internal Audit

Fieldguide is the agentic AI-native platform for audit and advisory. Fieldguide for Internal Audit extends Fieldguide's professional-grade AI platform into the internal audit function, enabling teams to collaborate with AI agents that automate evidence analysis, risk mapping, and control testing while preserving full transparency and audit rigor. Working alongside your team, Fieldguide's AI agents execute the most timeintensive parts of the audit process so auditors can focus on judgment, insight, and strengthening organizational trust.

Product overview

Agent led control testing

Professional-grade AI agents execute multi-step testing workflows—validating evidence, annotating documents, and summarizing results.

Auditors review and apply judgment while agents handle the most manual work.

Reporting

Real-time dashboards provide visibility into engagement progress, ownership, and potential delays.

Leaders gain a single operational view of audit performance across teams.

GRC integration

Controls, risks, requests, and evidence remain synchronized across platforms, allowing internal audit teams to execute work in Fieldguide while maintaining governance and reporting in their GRC systems.

The result: faster execution without disrupting existing workflows.

Native AI powered risk mapping

AI-assisted risk mapping connects risks, controls, and procedures automatically.

Teams gain faster scoping, stronger coverage, and clearer visibility into risk relationships across engagements.

Professional-grade agents help you conduct an Internal Audit in 20% of the time

Growth without headcount pressure

With Fieldguide, capacity doesn't just increase—it compounds. By automating routine tasks, companies enable junior auditors to participate in more meaningful stages of the audit earlier in their careers. This accelerates skill development, improves retention, and allows teams to scale audit coverage without expanding headcount.

The result: faster staff growth, and faster audits without the cost of additional headcount.

The real value for corporate clients is that Fieldguide dramatically increases the capacity of internal audit teams. With out-of-the-box workflows and automation, teams can handle the workload that would typically require a much larger IA team.

Real time reporting and insights

Fieldguide provides a unified view of profitability, staff utilization, and client responsiveness to help leaders see where bottlenecks occur, how teams perform, and where to invest for maximum return.

ISO 42001 Certified

Fieldguide is among the first AI platforms in the profession to achieve ISO 42001 certification, validating that our AI systems meet the highest standards for responsible AI governance, transparency, and oversight.

This ensures that AI-driven audit workflows remain secure, explainable, and aligned with professional standards.
